NEW BOOKS

Beck, Frank Victor. THE FIELD SEED INDUSTRY IN THE UNITED STATES: an analysis of production, consumption and prices of leguminous and grass seeds. Ladison, Wisconsin, University Press, 1944. 230 p. 61 B38

Mr. Beck, economist of the Field Seed Institute of North America, presents a continuous series of wholesale and retail prices of the major field seeds, with interpretation of their significance; analysis of the geographic and sea-onal patterns of sale and of the relation of seed prices to those of some other farm commodities and to the general price level at a given time; data on carry-over on farms and in the trade, and their effect on prices and on demands; and the outlook of the various seed commodities in the light of the economic and other factors involved. Included also is a description of the marketing practices of the industry.

Butler, Ovid M. comp. ANTRICAN CONSERVATION IN FICTURE AND IN STORY. Washington, D. C., The American Forestry Association, 1941. 160 p. 279.12 B97

Not a new book, but new in this library. Pany of you will want to make a mental note of the fact that we have this volume for it covers the history of conservation in a most concise manner.

Cain, Stanley A. FOUNDATIONS OF PLANT GEOGRAPHY. New York, Harper & Bros., 1944. 556 p. 452.9 Cl2

opments and thinking in the fields of systematics, evolution, speciation, cytology, genetics, pollen analysis, paleoccology, and aerography, and to synthesize the conclusions in these fields into a unified whole, related to the science of plant geography. In other words the volume constitutes an inquiry into the foundations of plant geography rather than a descriptive plant geography..."

Carrighar, Sally. ONE DAY ON BENTLE ROCK. New York, Knopf, 1945, 196 p.

On a June 18 some nine birds and animals, visited Beetle Rock - not in the formal parade of Noah's refugees but in the course of their unpredictable foraging with other creatures of the wild. On that and many another day Sally Carrighar watched them: a weazel and her brood, a lizard, a jay, a tiny deer mouse, a chickaree, a Sierra grouse, a coyote, a black bear and her cubs, and a mule deer. She describes their goings and comings with refreshing authenticity. The real Beetle Rock is near Giant Forest in Sequoia National Park

but the reader is tempted to speculate about other Beetle Rocks throughout California where wildlife gathers and where their antics may be observed by those ha ving the patience and imagination of a Sally Carrighar. The term "biological association" will become much more understandable to those who make a point of reading One Day on Beetle Rock.

Reviewed by Robert S. Monahan, Forest Service

Consumer Reports. 1945 BUYING GUIDE ISSUE. New York, Consumers Union, Inc., 1944. 382 p.

Readers of the monthly issues of Consumer Reports will be interested in the annual number which contains all the material which previously appeared in the Reports, condensed into one compact volume and brought up to date when possible.

Farmer, Fannic Merritt. THE BOSTON COOKING-SCHOOL COOK BOOK. 7th ed. completely revised by Wilma Lord Perkins. Boston, Little, Brown and Co., 1944. 824 p. 389.25 F221B

Both the professional dictitian and the bride who does not know how "to boil water" will find this standard cook book of value. In addition to recipes there are cooking charts, weights and measures, methods of substitution, and measures.

Hinds, Norman E. A. GEOLORPHOLOGY: the evolution of landscape. New York, Prentice-Hall, Inc., 1943. 894 p. 531 H58

Abundant illustrations supplement the text of this book which tells how the face of the earth has come to look as it does today. It is written for the general reader and not for the expert by a Professor of Geology, at the University of Oalifornia.

Tcague, Charles Collins. FIFTY YEARS A RANCHER. Los Angeles, Ward Ritchic Press, 1944. 199 p. 120 T222

"In this history of Mr. Teague's personal experiences, covering a period of 50 years, he takes up from his boyhood days in Maine and a little later in Kansas, through his Early ranching years to the present day when he is president of the California Fruit Growers Exchange and the California Fruit Growers Association. Mr. Teague spent 1929-31 in Vashington as one of the active members of the Federal Firm Board. George E. Farrand, a distinguished California Mayyer, who wrote the preface, emphasizes that this book covers an important or in the development of the citrus and walnut industries in California."

HIM BOOKS

BRANDT, KARL. The Reconstruction of World Agriculture. N.Y., Horton, 1944. 416 p. 281 B733

Mr. Brandt, economist in Stanford University's Food Research Institute, is regarded as a leading authority in matters dealing with world food requirements. He believes in the idea of building a peace on the foundation of a sound international program that will solve the problem of agricultural surpluses on the one hand and underconsumption on the other. He foresees a reduction in farm populations with the technological improvements being made in agriculture.

GREENBERG, DAVID B. and CORBIN, CHARLES. So You're Going to Buy a Farm. N.Y., Greenberg, 1944. 140 p. 31.3 G82

A simple but reliable guide book for prospective buyers of large or small farms written by men with practical farm experience. It gives concrete answers to questions about selection of farms, size, location, financing, soils, fertilizers, erosion. In addition to the elementary aspects of farming, the writers include brief material on government subsidies, titles, leases, and recent scientific developments in the field of agriculture.

KIHMEY, J. P. The Essentials of American Timber Law. M.Y., Wiley, 1917 including 1942 Supplement. 279 p., 48 p. 99.59 Un32K ...

The original 1917 edition has been reprinted in its intirety, but to this has been added a 48 page supplement which while not giving all court rulings subsequent to the 1917 book, does include the decisions on legal questions which had never previously been posed, and some decisions which serve to clarify points of obscurity in the earlier decisions.

NORTH AND ERICAN WILDLIFE COMPERANCE. Transactions of the Minth Morth American Wildlife Conference... Chicago, Ill. Washington, D. C. American Wildlife Institute, 1944. 376 p. 412.9 N814

THORP, RAYHOND W. and WOODSON, WELDON D. Black Widow: America's most poisonous spider. Chapel Hill, Univ. of North Carolina Press, 1945. 222 p. 434 T392

Spiders have received the attention of mankind since the days of the ancients, and even the Bible contains two references to them, but they made headlines in 1934 when a mild winter and nationwide drought resulted in a rapid increase of the "black widow". Spider plots were featured in mystery stories, movies and comic strips. This book is the result of the 1934

- events, for the authors turned from feature articles on the black widow to serious investigations and for 10 years have carried on their tireless work. They were aided by Dr. Emil Bogen who had previously made significant contributions to medical knowledge concerning the black widow.

- U. S. GOVERNITENT PRINTING OFFICE. Style Manual. Rev. ed. Washington, 1945. 435 p. 238 Un3Gs

This new edition is larger than the former ones, and in addition to the usual information contains about 100 pages of material on foreign languages, and the forms of reports, documents, laws, Congressional Record, Senate and House journals.

Vol. 4, Nos. 4-5

April-May 1945

NEW BOOKS

BROMFIELD, LOUIS. Pleasant Valley. N.Y., Harper, 1945. 300 p. 31.3 B78

The account of one man's lifelong experience with the good earth and in particular the story of his life on a big farm in the hill country of Ohio.

"This book tells his adventures in selecting the land for his new home, building the house, furnishing it. He gives his ideas on how farming can be made to pay, the problem of conserving the soil so it will be made to give good crops. And he tells about his neighbors, the people he sometimes used as characters in his books. Whether or mt we accept Mr. Bromfield's ideas on the future of farming, most of us appreciate the beauty of America, and all of us like stories about our neighbors".

CHASE, STUART. Democracy under pressure: special interests vs. the public welfare. Guide lines to America's future as reported to the Twentieth Century Fund. N.Y., Twentieth Century Fund, 1945. 142 p. 280.12 C38D

This volume is the fourth in the series titled When the War Ends and is Stuart Chase's report on the Pressure Boys in action. It needs no review for most USDA Library borrowers are familiar with the series.

DEMPSEY, PAUL W. Grow Your Own Vegetables. Rev. ed. Boston, Houghton, Mifflin Co., 1944. 220 p. 91.15 D39

More than ever before we are urged to grow our own vegetables. This very attractive book is directed to the owner of that two-by-four-back-door plot or the real backyard garden of an acre or more. Flanting and care of the garden, control of insects, cultivation of small fruits, and preservation of the vegetables are but a few of the topics covered. And for that aesthetic touch there is an added chapter on "Flowers in the Vegetable Garden".

EARDLEY, A. J. Aerial Photographs; their use and interpretation. N.Y., Harper, 1942. 203 p. 325.2 Ea7

"Vertical photographs are unexcelled as base maps for most kinds of geologic mapping and generally exhibit features that permit considerable interpretation of the geology of the photographed area. The presentation

of these two aspects, the geologic use and interpretation of aerial photographs, is the principal object of the book".

The author has taught map-reading at the University of Michigan.

ETCHEVERRY, BERNARD A. Land Drainage and Flood Protection. Stanford Univ. Press, 1940. 327 p. 54 Et1

"This work deals with the surface drainage of agricultural lands, affected by excessive water due to precipitation or irrigation; the protection of lands against flood and tide waters; and the methods of spreading assessments for the apportionment of the cost of the several classes of improvements to the areas benefited..." Quoted from the Preface.

ECKLES, CLARENCE H., COMBS, WILLES B. AND MACY, HAROLD. Milk and Milk Products. N.Y., McGraw-Hill, 1943. 414 p. 44 Ec5M Ed.3a

Topics covered: composition and properties of milk; microbiology of milk; milk products and processes involved in their manufacture; dairy arithmetic. Although this text was prepared primarily for leginning students and the layman, and avoids controversial material, this new edition does include some of the more definitely established facts and accepted practices which investigators have set forth in recent years.

HAYSTEAD, LADD. Meet the Farmers. N.Y., Putnam, 1944. 221 p. 281.12 H33

This little book is concisely described in three of the author's own sentences in his very informal preface:

"This book outlines the differences and likenesses between farm groups. It pries into the daily life, the mores, folklore, and superstitions of and about farmers. It ho pes to explode misconceptions held not only by urban people but, seemingly, by some of the self-appointed farmers' representatives".

Its style is fresh, even breezy, with occasional vernacular dialogue taking the place of exposition. It is full of American idiom, quick and easy reading for an American but perhaps difficult for foreign students who have learned their English abroad.

Review by C. J. Kraebel, California Forest & Range Experiment Station

HEDRICK, U. P. Fruits for the Home Garden. N.Y., Oxford Univ. Press, 1944.
171 p. 93.21 H35Fr

"In Fruits for the Home Garden Dr. Hedrick has brought together a vast amount of information, presenting it in a manner that makes it valuable to backyard gardeners, amateurs with small orchards, and commercial growers alike. This is something of a feat. Dr. Hedrick accomplished is not only because he has a full knowledge of his subject, but also because he knows how to present it in a non-technical manner, wherein he differs from many eminent scientists".

HIGHSTONE, HAROLD ALFRED. Practical farming for beginners. N.Y., Harper,

Everyone thinking of taking up farming either as a part-time or fulltime occupation will want to read this book before visiting the real estate agent. It is a manual of farming practice for beginners, giving step-bystep guidance toward a livelihood on the land, describing in realistic detail every essential factor for which provision must be made to assure economic independence through farming as a way of life.

Commence of the second MILLER, CHARLES ERMEST AND TURK, LLOYD MILDON. Fundamentals of soil science. N.Y., Wiley, 1943. 462 p. 56 M613

Compare of Edition

"The purpose of this book is fourfold, first, to give the reader the opportunity to become familiar with soils as natural units or entities and with their inherent characteristics; second, to develop in the student an understanding of the significance of fundamental soil properties; third, to set forth basic relationships between soils and plants; and last, to give the reader an understanding of the principles involved in the use of proved soil-management practices".

LOWDERWILK, WALTER CLAY. Palestine; land of promise. N.Y., Harper, 1344. 236 p. : 280.185 195 1944b

An American soil expert has come to the conclusion that Palestine is a land which by the unique combination of the natural features and revenigoes of the Jordan Valley, makes possible a huge reclamation project capable of supporting at least four million refugees in addition to the two million Jews and Arabs already living there. This plan not only offers a practical solution to the Jewish refugee problem but also provides a large-scale model for the restoration of other long neglected lands of the Near Mast.

U. S. DEPARTMENT OF AGRICULTURE

Livestock Farming, by William Jackson, Government Printing Office, 1944. 310 pc 40 J13

Managing a Farm, by the Bureau of Agricultural Economics. Government Printing Office, 1944. 333 p. 1 Ec7Ma

What is Farming? Prepared ... under the sum rvision of Gustave E. Larson. Government Printing Office, 1944. 504 p. 1 Ags4Wh

These titles have also been published by the Armed Forces Institute in their series EM. Since that series was not generally available, the Dept. of Agriculture reissued this extremely interesting Twell-written and wellillustrated trio.

U.S. LAWS SEASUTES, ETC. Farm Belief and Agricultural Adjustment Acts, coups by Manua As Dewis Government Printing Office, 1944. 294 p. 251.12 Un383 1944

WHITMAN, ROCER B. First Aid for the Ailing House. 3d ed. rev. N.Y., Whittlesey House, 1942. 359 p. 323 W59 Ed.3

Since its publication, this has been recognized as the standard, author-

itative book on how to keep a house in good condition. This third edition includes much information on substitutes for building materials no longer available to the house owner. There are also instructions for extending the life of parts of houses which are likely to wear.

NEW BOOKS

BREED, CHARLES B. AND HOSIER, GEORGE L. The Principles and Practice of Surveying. N. Y., John Wiley & Sons. 2 vols.

Volume I - Elementary Surveying. 8th ed. 1945. Volume II - Higher Surveying. 5th ed. 1938.

Our old edition of this standard work has been replaced by the latest

HOTTES, ALFRED CARL. The Book of Perennials. N. Y., A. T. DeLaMare Co., 1944. 272 p. 97.42 H79P Ed.6

Hundreds of worth-while perennials for the garden are described in simple, practical language and the text is a companied by excellent illustrations of each of them. Chapters deal with the general principles of successful culture, use and propagation. Lists assist in combining the proper sorts for color harmony, cultural similarities, and continuous bloom.

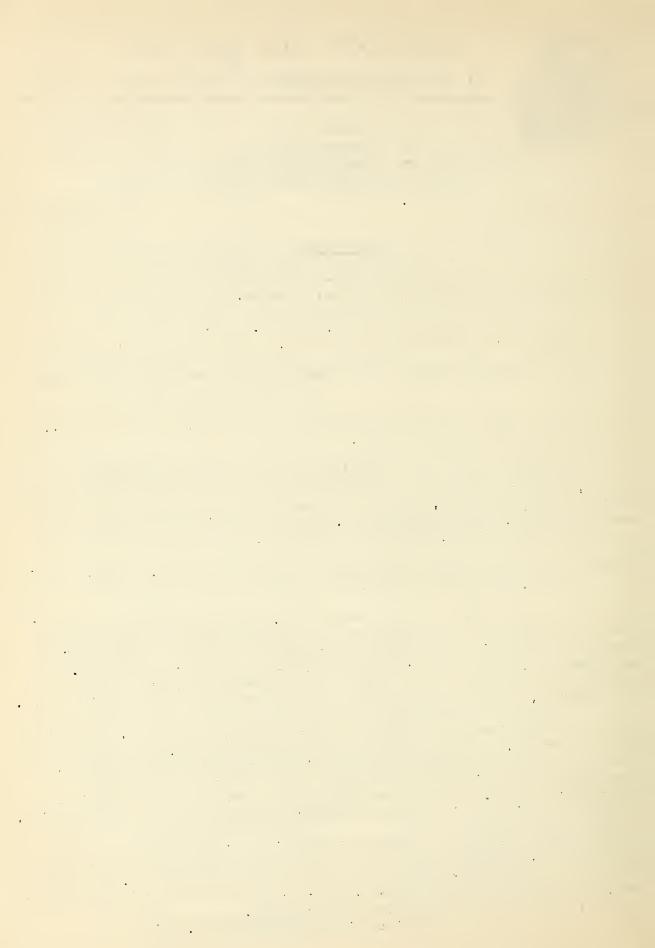

JURAM, J. M. Bureaucracy: A Challenge to Better Management. W. Y., Harper & Bros., 1944. 138 p. 249.2 J97

J. M. Juran's little book, Bureaucracy, A Challenge to Better Management, is exactly what it purports to be, an intelligent and constructive s cientific analysis of the Federal bureaucracy in terms of its managerial effectiveness. The preface is candid and the book proper is readable. Unlike many other books on the subject of bureaucracy this author does not merely smear, call names, and lash out at tax eaters with fire and brimstone.

He is not content merely to collect believe-it-or-not instances. Instead he makes a serious, objective analysis of the Federal set-up, its good points and bad, introducing comparisons with private enterprise every so often. He shows that some evils are more prevalent in the Government and others in private enterprise. He offers sensible means of overcoming these evils, though he realizes that miraculous overnight reforms are out of the question.

The chapter on Red Tape and Systems is especially recommended. The one on Duplication - The Common Cold of the Bureaucratic World provides much food for thought. The entire 136 pages of text merit your attention. The author is Assistant Administrator of Lend-Lease; he has also been an industrial executive. The book is published by Harper & Bros.

Reviewed in USDA, Hovember 13, 1944

MULLER, FREDERICK WILLIAM. Public Rural Electrification. Washington, D. C., American Council on Public Affairs, 1944. 183 p. 535 11912

It is difficult for persons accustomed to the convenience of electricity to realize what a large segment of our rural population still must do without the use of electric power and electric light. This book is primarily a study of electric service to farm families since the creation of the Rural Electrification Administration in 1935, and with the operation of that agency and the rural electric cooperatives which it sponsors. The final chapter deals with possible future developments.

PHELPS, EARLE B. S tream S anitation. N. Y., John filey & Sons, 1944. 276 p. 292 P51

Here are the basic principles of stream sanitation and of remedial control measures, together with a chapter on stream microbiology by James B. Lackey of the U.S. Public Health Service.

PIPER, C. S. Soil and Plant Analysis: a Laboratory Manual of Methods for the examination of soils and the Determination of the Inorganic Constituents of plants. N. Y., Interscience Publishers, Inc., 1944. 368 p. 56.4 P66

Some of the chapter headings are: The Collection and Preparation of Soil Samples: Hydrogen Ion Concentration, Conductivity and Nater Soluble Salts: Mechanical Analysis: Soil Colour: Organic Matter; Lethods for the Ashing of Plant Material: The Determination of the Trace Elements.

WALLACE, LILY HAX WRTH. Sea Food Cookery: A Complete Handbook for Every Kind of Fish Cooking, With Menus and Suggestions For Serving. N. Y., II. Barrows & Co., 1944. 180 p. 389.25 W152S

The limitations of the past year with its meat shortages and rationing gave fish new importance in the home menu, and homemakers have turned to fish and shellfish for nourishing and delicious meals.

Sea Food Cookery gives information regarding practically all fish found in our ocean coastal area, as well as inland lake and river fish; it contains general cookery instructions and hundreds of special recipes. Canned fish, shellfish, quick-frozen fish, fish for breakfast, luncheon and dinner, for entertaining, fish a andwiches for the workers' lunchboxes, fish salads, and indeed fish recipes of every type are in its pages.

WISE, LOUIS E. ed. Wood Chemistry. N. Y., Reinhold Publishing Corporation, 1944. 900 p. 99.79 W75

In the preparation of this volume, Ir. Wise, Research Associate of the Institute of Paper Chemistry, has had the contribution help of thirteen authorities in the field of wood chemistry and technology. As its title suggests, it is a book for chemists and those whose work and studies involve a knowledge of wood chemistry and of research progress in that field. It is published as a monograph in the series of scientific and technological works sponsored by the American Chemical Society and as such, supplements Monograph 28, "The Chemistry of Wood," published in 1926.

As the writer points out, a certain a mount of overlapping could not be pre-

vented in expanding the original monograph to include the more important information which fundamental investigations have yielded since the original monograph was published. Considering the remarkable advances that have been made in the field of wood chemistry in recent years the book is extremely timely and serves the dual purpose of providing a down-to-date text and giving impetus to further researches into the chemistry of wood.

Reviewed in American Forests, March 1945

YODER, DALE. Personnel Management and Industrial Relations. N. Y., Prontice-Hall, 1945. 848 p. 249.3 Y7P

A very complete and detailed book concerning all phases of personnel work such as statistics, classification, recruitment, selection, morale, stabilization, etc. The information is well grouped and presented in clear and easily read style. The publication is intended primarily for the use of private industrial concerns, but gives due regard to the application of basic principles to government work and conditions. Uses good government practices as examples for industry. Highly recommended as a reference book and good reading for general background information.

IF YOUR RECENT TRANSFER IS NOT A MILITARY SECRET,
THE LIBRARY WOULD LIKE TO KNOW YOUR NEW ADDRESS

HOW TO USE THE LIBRARY

- OUR BORROWERS are the employees of the Department of Agriculture in California and Nevada.
- VISIT THE LIBRARY, telephone, or send us a written request for the material or information you need. Form AD=245, which is obtainable through your usual supply channels, will be found to be a convenience and time=saver.
- THE USUAL LOAN PERIOD is one month with the privilege of a month's renewal.

 The time limit on books in demand must of necessity be limited. If a publication is in use or there is a waiting list, your request will be noted and the material will be sent as soon as it is available.
- CURRENT MAGAZINES for official use will be routed to you upon request. The time limit is three days. If you do not have a list of the publications received in your Branch Library, ask for one.
- PUBLICATIONS NOT AVAILABLE in the Branch Library will be borrowed from a local library or from the Department Library in Washington. Our Nowsletter is not a complete list of our acquisitions, so do not hesitate to ask for what you want.

YOUR SUGGESTIONS are always welcome.

IT MAY BE OF, INTEREST TO YOU TO KNOW THAT

713 USDA employees in California & Nevada received some kind of library service last year; that 3,452 questions were asked and 4,473 books borrowed; that more than 40,000 magazines were routed to them.

Were you one of the 713 borrowers, or One of the 1,173 persons who visited the Library?

' 'NEW BOOKS

ASHBROOK, FRANK G. How to Raise Rabbits for Food and Fur. N. Y., Orange Judd Pub. Co., 1945. 256 p. 40.2 As3

* "This book is written for the man or woman in the city, in the suburbs, on the farm or in the classroom who is primarily interested in raising rabbits for meat and fur. The Author makes a special appeal to raise rabbits to replace rationed meats because of its quick and easy production".

BOERKER, RICHARD H. D. Behold Our Green Mansions. Chapel Hill, Univ. of North Carolina Press, 1945. 313 p. 99.61 B63B

"Behold Our Green Mansions" John Muir would have liked this alluring title. It's printed by the University of North Carolina Press at Chapel Hill and the many brown-toned illustrations add a special value and charm. Mr. Boerker, a classmate at Michigan, under Filbert Roth, was a technician on the Lasson Forest from 1911-14 and wrote "Our National Forests" about that time. He is now teaching biology at the Kingston, New York, High School, so he is among the few foresters who may speak objectively and without fear of treadon any Government, lumber industry, or academic toes. He has a flair for . literary expression, and tells the American citizens as well as the forester, in-excellent, stimulating and easily-read English - 300 pages of it - about the original forest lands of the United States and what happened to this immense storehouse of timber with its abundance of wild life, grazing, recreation, esthetic and water storage values. There is considerablo factual data about the various forest regions of the United States. A special chapter stresses the forestry sotup in the Southeast where the best growing conditions in the country are found yet where some of the most appalling practices with their attendant distress and poverty prevail. He also discusses the reason for so many forest fires; the economic and social devastation resulting from soil erosion; the relation of forests to floods; the interdependence of forestry and agriculture; as well as tree diseases and insect enemies. In fact, the whole American forest scene is brought up-to-date and Mr. Boerker makes clear the steps now necessary for the rehabilitation and permanency of America's slaughtered and ravaged forest lands.

Review by Oscar Evans, Forest Service (Retired)

CLARKSON, ROETTA E. Herbs: Their Culture and Uses. N. Y., Macmillan, 1942. 226 p. 97.21 C56H

This attractive book with drawings of garden plans and identification drawings of individual herbs, gives concise directions for growing all kinds of herbs, methods of harvesting and storing them. Detailed instructions for making potpourris, dyes, sachets, etc., are given and there is a section of recipes using culinary herbs.

DODGE, BERNARD O. AND RICKETT, HAROLD W. Diseases and Pests of Ornamental Plants. Lancaster, Pa., Jacques Cattell Press, 1943. 638 p. 464.08 D66

Part One of this handy volume is a compact introduction to the study of plant diseases and pests. It lists symptoms and prescribes preventions. In Part Two some six hundred species of garden and greenhouse plants are listed alphabetically; under each plant are its important diseases and the proper methods of their control.

JENSEN, VERNON H. Lumber and Labor. N. Y., Farrar & Rinehart, 1945. 314 p. 283 J45

This book, fifth in a series on "Labor in Twentieth Century America", is exactly what its title implies. From a modest unpublished Ph.D. thesis on "Labor Relations in the Douglas Fir Lumber Industry", written at U. C. in 1939, the author has developed an unusually well-documented presentation of what his editors proudly and properly acclaim as "the first full and scholarly account of twentieth century labor in a field which, for all its fascination, has been little studied".

Californians will be disappointed in Dr. Jensen's failure to discuss the labor phase of logging and milling operations in the State's redwood and pine industry, not even mentioning the Red River Lumber Co. strike at Westwood in 1938. But, as pointed out by the author, "In California there has been no great concentration of production. Units were scattered and were located primarily to serve the local demand". In the Northwest, of course, unionization has been much more pronounced than elsewhere in the country and the author spares no detail in explaining how the labor movement developed in the Douglas fir region.

Foresters, too, will be disappointed that in his final chapter Dr. Jensen did not enlarge upon the effect of genuine sustained-yield management with emphasis on permanent forest communities and presumably more enlightened labor policies. But the last sentence of the entire book carries this fundamental challenge: "Permanent and stable communities must replace the transitory, shifting communities where normal lives cannot be lived, and which have always been breeders of discontent."

any bamili

the second second

ក្រាត់ព័ត៌កម្ចុជា ឆិក

In reviewing present conditions the author claims that "to a large extent the industry failed to produce a sufficient volume of the strategic lumber materials as needed" and dodges any specific prediction as to labor conditions in the postwar lumber industry with the astute observation that, "no one can predict possible occurrences while the economy is in a state of wartime flux."

To the many foresters who are directly concerned with improving conditions in the forests and wood-using industries but who have had limited personal experience as woodworkers, "Lumber and Labor" provides a comprehensive insight into labor's attitude a nd how labor has already attained some of its objectives in the lumber industry.

Review by Robert S. Monahan, Forest Scrvice

MARSDEN, STANLEY J. AND MARTIN, J. HOLMES. Turkey Management; 3rd ed. Dan-ville, Ill., The Interstate, 1945. 758 p. 47.3 M35

The authors are Poultry Husbandman at the Agricultural Research Center, Beltsville, Md., and Head of the Poultry Department, Purdue University, respectively. This appears to be a complete treatise, covering everything from breeding and feeding to grading and marketing.

SCHULTZ, THEODORE W. Food For The World. Univ. of Chicago Press, 1945.

This book consists of the 23 papers and related discussions that made up the program of the Twentieth Institute of the Norman Wait Harris Memorial Foundation held at the University of Chicago, September 4 to 8, 1944. Under the theme, "Food in International Relations," the several sections deal with The Food Movement", "Population", "Nutrition", "Food Supplies", "International Relations", and "Consequences and Policy". Although most of the authors and discussants are Americans, many of them have been associated with international activities in the fields of agriculture, population studies, food economics, or nutrition. There are stimulating clashes of opinion on many points, but no challenge of the fundamental statement from the United Nations Conference on Food and Agriculture that "the first cause of hunger and malnutrition is poverty". Although the reader is not likely to be equally interested in all these facets of the international food problem, he is almost sure to be rewarded both by the competent treatment of his special concerns and by the brilliant essays on general policy.

Review from THE CHILD, July 1945

SHANKLE, GEORGE EARLIE. Current Abbreviations. N. Y., H. W. Wilson Co., 1945. 207 p. 211 Shl 1945

The American people are in the midst of an era of abbreviations. Much of the English used both in speaking and in writing clips off so much of the essential forms of words or of sontence structure that it becomes almost unintelligible. Newspapers, magazines, business or trade journals, governmental agencies and bureaus, and people in general conservation use an abbreviated language almost as technical as chemical formulas.

WORTH, HELEN. Down-on-the-Farm Cook Book. N. Y., Greenberg, 1943. 322 p. 389.25 W89

"If you've ever eaten a meal on a farm, lived in the country, or just wanted to, this volume will make your mouth water! No ordinary cookbook, it tells you how to prepare distinctive farm dishes brimful with nourishment and bursting with goodness. Its recipes for choice substantial American farm fare have been gathered from every rustic corner of the nation. The devotee of regional cookery will be taken on a voyage of culinary discovery and delight.

Simplicity and succulence are the outstanding qualities of the recipes in this book. No salads made to resemble bunnies, no desserts tricked out to look like the Hanging Gardens of Babylon..."

NEW BOOKS

ARNOW, L. EARLE & REITZ, HENRY C. Introduction to Organic and Biological Chemis try. St. Louis, C. V. Mosby, 1943. 736 p. 386 Ar64

BAILEY, JOSEPH CANNON. Seaman A. Knapp: schoolmaster of American agriculture. N. Y., Columbia Univ. Press, 1945. 207 p. 120 K72B

"The story of the man who put science in the farmers' field along with the new-fangled machines of the agricultural revolution, and bridged the gap between the rural folk and the findings of the la boratory. Seaman Knapp's long life spans the trans ition in American agriculture from the vanished days of homespun self-sufficiency to the specialized, commercialized and mechanized age of international markets in full swing on the eve of World War I..."

BRINKLEY, STUART R. Introductory General Chemistry; 3rd ed. Macmillan, 1945. 645 p. 386 B772I Ed.3

BRUNNER, EDMUND D., SANDERS, IRWIN T. & ENSMINGER, DOUGLAS. Farmers of the World: the development of a gricultural extension. N. Y., Columbia Univ. Press, 1945. 208 p. 275.2 B83

"The primary aim of this book is to discuss the most effective general approach which a government or a private agency can use in helping rural people solve their every day problems. Considerable space is devoted to specific ways and means of carrying on extension programs, but these are incidental to the primary aim. The basis of discussion throughout is with the democratic framework: the growth and improvement of the individual rather than the fashioning of automatons who merely obey orders handed down from above. The authors, all of whom are experts, have followed a central point of view: the similarity of the problems encountered around the world and the importance of observing certain guideposts or principles..."

COOPER, ALFRED M. Supervision of Governmental Employees. McGraw-Hill, 1943. 202 p. 249.3 C78S

In this little book the author emphasizes the differences in supervisory techniques under civil s ervice and in private enterprise. The book is the result of years of experience conducting supervisory training conferences attended by governmental supervisors and may be used as a reference book for experienced supervisors or as a textbook for beginners,

- EHLERS, VICTOR M. & STEEL, ERNEST W. Municipal and Rural Sanitation; 3rd ed. McGraw-Hill, 1943. 449 p. 449.1 Eh5 Ed.3
- FISHER, ANNE B. The S alinas: upside-down river. N. Y., Farrar & Rinehart, 1945. 316 p. 138 F53

"In the Salinas, twenty-seventh volume in the Rivers of America Series, Anne B. Fisher tells the romantic story of the "Upside-down River". Flowing north it waters one of the richest agricultural areas in the world. First settled by the padres and Spanish who lived in feudal luxury in a lush land, the valley grew up around the missions.

Shortly after a July sunrise in 1771 the first fence in the valley of the Salinas was started to enclose the little compound where God, two padres, and a corporal's guard were to make their habitation. Courageously at dawn the padres sang out their canticle of faith in the new day. Indians came from the hills to see these new people who had settled in their valley. They tasted strange foods and were so caught by yellow rows of corn and beans that they joined their fellows and became converts of San Antonio. In five years San Antonio was prosperous. Stock bred from the few cattle brought from Mexico flourished and the irrigation ditches built down the canyon worked perfectly. Indians were good and labored well, and there was no trouble along the Salinas.

With the arrival of ambitious Anglo-Saxons the dreamy life came to an end, a constant battle for land and green gold was bitterly fought, and men gambled on the weather. Soon word went around the world calling all men to come and claim their golden bounty from this new land. People from all over the country rushed to buy farms in the "California Home Extension Association", some poured their life savings into Lewis! "Colony" and prepared to live a life of case and sunshine, and others like the "Okies", trekked in broken mechanical wreeks to California, the land of work and plenty.

The Salinas is the dramatic story of a river that is not very long, but on its banks people of many lands and races have sought and fought for "Paradise".

MOORE, ARTHUR. The Farmer and the Rest of Us. Boston, Little, Brown & Co., 1945. 226 p. 281.12 M58

To quote the author, he is "writing about pork chops and the people who produce them from the point of view of a man who cats them". Mr. Moore is an Illinois newspaperman who discusses the farm bloc, labor, prices, soil conservation, etc. so the city dweller can understand.

ROOT, A. I. The ABC and XYZ of Bee Culture: an encyclopedia pertaining to scientific and practical culture of bees. Rov. and rewritten by E. R. Root, H. H. Root and M. J. Deyell. Medina, Ohio, The A. I. Root Co., 1945, 720 p. 424 R67A

This encyclopedia of bee culture seems to include not only just about everything one could want to know about bees, but also a great deal of information about honey - its use as a food and cosmetic, and all about honey extraction.

TIEMAN, HENRY DONALD. Wood Technology: constitution, proporties and uses. N. Y., Pitman, 1944. 2nd ed. 328 p. 99.79 T44

TRESSLER, DONALD K. & EVERS, CLIFFORD F. The Freezing Preservation of Foods. N. Y., Avi Publishing Co., 1943. 789 p. 389.3 T72

Frozen foods have become a part of our daily lives almost overnight and since this volume is concerned with the home freezing of foods as well as freezing on a commercial scale it should interest many.

VAN DERSAL, WILLIAM R. Ornamental American Shrubs. Oxford Univ. Press, 1942. 288 p. 455 V28

This book deals with native American shrubs selected for their value as garden plants. Naturally a volume of this size can include only about 200 plants, but many of them are little known to American gardeners.

WOOLMAN, MARY SCHENK & MCGOWN, ELLEN BEERS. Textiles: a handbook for the student and the consumer; 3rd ed. Macmillan, 1943. 388 p. 304 W88T

This new edition discusses the textile world as it is and not as it may be in the postwar years. Some fibers have disappeared from the market and others have taken their places. There are chapters on the fibers and finishes in common use, a chapter on dyes, the selection of fabrics for clothing and household use, and their care.

M.ERRY CHRISTMAS
and
A HAPPY NEW YEAR

NEW BOOKS

ALLEN, SHIRLEY W. Handbook of Information on Entering Positions in Forestry.

Washington, D. C., Society of American Foresters, 1945. 56 p. 99.06 AL52

BOY SCOUTS OF AMERICA. Handbook for Boys. Rev. ed. New York, 1944. 570 p. 275 B69

DOBZHANSKY, THEODOSIUS. Genetics and the Origin of Species. 2d ed. rev. New York, Columbia Univ. Press, 1941. 446 p. 443 D65 Ed.2

This revised edition of a much-used text contains a discussion of "the mechanisms of species formation in terms of the known facts and theories of genetics". The 45 page list of Literature Cited is a valuable addition to the text.

FENSKA, RICHARD R. Tree Experts Manual. New York, De La Mare, 1943. 192 p. 97.7 F36

Here is brought together in compact form a miscellany of facts and instructions on the care of shade and ornamental trees, including details on transplanting, pruning, spraying, bracing, tree wound dressing, and insect control.

GERICKE, W. F. The Complete Guide to Soilless Gardening. New York, Prentice-Hall, Inc., 1945. 285 p. 90.15 G31

A well-illustrated manual which gives instructions for setting up the required apparatus and preparing nutrient solutions for hydroponics. There are discussions on planting, on water, and on the growing of tomatoes, potatoes, root, leaf, and seed vegetables, and field crops. Three chapters are devoted to the production of flowers, including annuals, woody perennials and flowers from bulbs.

GILMAN, JOSEPH C. A Manual of Soil Fungi. Ames, Iowa State College Press, 1945. 392 p. 462 G42

"The present volume is designed to place a tool in the hands of investigators that will enable them to identify the soil fungi which they may encounter in the course of their work. It contains little new data but brings

together from many scattered points the descriptions of the fungi which have been reported as isolated from the soil together with keys to a id in identifying the fungi in hand".

HOTTES, ALFRED CARL. The Book of Annuals. 5th ed. New York, De la Mare, 1945. 172 p. 97.41 H79

This is the latest revision of a small but complete book on annual flowers. Chapters contain information on hotbeds, cold frames, seed sowing, transplanting, color combinations, lists of annuals for every purpose, as well as the descriptions of flowers in understandable language. There are numerous illustrations and drawings. This is a companion volume to the same author's Book of Perennials which was listed in the June-July Library Newsletter.

ISRAELSON, ORSON W. Irrigation principles and Practices. New York, John Wiley & sons, 1932. 422 p. 55 Is7

Although intended primarily as a college text for students of agriculture and agricultural engineering, this volume will be useful to soil and plant scientists, agronomists, and all persons interested in the proper use and control of irrigation water.

NORTH AMERICAN WILDLIFE CONFERENCE. Transactions of the Tenth North American Wildlife Conference. Washington, D. C., American Wildlife Institute, 1945. 359 p. 412.9 N814

TREWARTHA, GLENN T. An Introduction to Weather and Climate. 2d cd. New York, McGraw-Hill, 1943. 545 p. 340 T72

TWENTIETH CENTURY FUND. American Housing; problems and prospects. The factual findings by Miles Colean, the program by the Housing Committee. New York, 1944. 466 p. 296.2 T91A

In an objective and impartial survey backed by an endowed institute for economic research the Housing Committee presents a comprehensive analysis of the entire housebuilding industry in America from production to marketing. Chapter 12 contains conclusions and recommendations for action.

U. S. NAVY. Photography; Navy training courses. Washington, D. C., Supt. of Documents, 1945. 2 vols.

These two volumes were prepared by the Standards and Curriculum Division of the Bureau of Naval Personnel for the enlisted men of Naval Aviation. Vol.I explains light and lenses, view and hand cameras, negatives, techniques, chemicals and solutions, development, printing and negative trouble. Vol. II explains color photography, aerial photography, stereoscopy (the reproduction of depth in pictures), motion picture photography, the care of photographic equipment, and the administration, regulations and records pertaining to photography.

VERDOORN, FRANS. ed. Plants and Plant Science in Latin America. 381 p. Waltham. Mass., Chronica Botanica, 1945. 453 V58

This is a valuable compendium of information on the natural resources, vegetation, and plant sciences in Latin America. The aim of this collection of articles, each by a different author, is "to give the agrenomist, betanist, forester, and phytopathologist information which he may need when starting

work on the wild or cultivated plants of Latin America". The articles deal with climatology, soil conservation, fat and oil resources, economic plants, forests, problems of tropical agriculture, location of botanical collections, soils, grazing, a list of plant science institutions, stations, societies, etc., and a survey of the plant resources of each of the Latin American countries. The illustrations, maps, and bibliographies contribute much to the collection.

WILSON, CHARLES MORROW, ed. New Crops For the New World. New York, Macmillan, 1945. 295 p. 31 W69

Here are fascinating ctories of crop migration and the "emergence of new or renovated crops for America". The 16 chapters are each written by experts in many phases of inter-American and international agriculture. They tell of the rubber plantations and silks from South America, of bamboos and tropical fruits, of essential oils and waxes produced in Latin America, cinchona, drug crops, forest resources of tropical America, of peppers and sugarcane, and many of our flowers whose criginal homes were in Central or South America. The many full page photographs add materially to the text.
